All-in-one Rewards – Installation guide

Table of Contents

1. Installation 1
2. Add a language 1
3. Configuration 1
4. « Gifts products » feature on products lists 2
5. Upgrade 2
6. Demonstration 3
7. Contact 3

1. Installation

In the « Modules » tab of your back-office, click on « Add a module from my computer », choose the zip file, then click on « Upload this module ». Module is now installed.

2. Add a language

The module is translated in French, English, Spanish and Italian. If you plan to use others languages, you will have to translate all labels using the translation tool in the back-office, and you will have to translate all mails : duplicate folder mails/en/ from the module, replace « en » with the ISO code of the new language, then translate all texts.
Mails starting with the 16- prefix are used for Prestashop 1.6 and above, others are for Prestashop 1.5

3. Configuration

You can configurate the module from the modules list, or from the Quick Access list.
The first time you access the settings, if « loyalty », « referralprogram » or « advancedreferralprogram » modules have been used on your shop, a first step is displayed asking you if you want to import datas from these modules, and informing you that they will be automatically disabled.
Then you really enter into the configuration part of the module.

« About / News »

This tab displays last news about the module, like new features, bugs detections or fix... If a new version of the module is available, a message wil tell you, and a link to download the file will be displayed.
You will also find here the contact information of the developer.

« Rewards account »

Here you choose the order's state when rewards are awarded or cancelled, and define the options for the voucher generated from the rewards.

« Loyalty program »
Here you set the specific options of the loyalty plugin. You can also completely disable the loyalty feature if you don't want to use it on your shop.

« Sponsorship program »
Here you set the specific options of the sponsorship plugin. You can also completely disable the loyalty feature if you don't want to use it on your shop.

« Facebook Like »
Here you set the specific options for the reward given when someone Likes your shop on Facebook. You can also completely disable the loyalty feature if you don't want to use it on your shop.

The module was designed so that it can easily integrate new features / new types of rewards, called "plugins". Each plugin that will be added according to your suggestions will have its own tab.

4. « Gifts products » feature on products lists

product-list.tpl :
With Prestashop 1.5.x, if you want to display on the products lists the button allowing to buy the product with the rewards, it requires to modify the product-list.tpl file in your theme folder, and to add the following line in the products loop, just before the closing </li> tag :
{hook h="displayProductPriceBlock" product=$product type='after_price'}

crossseling.tpl :
With Prestashop 1.6.x, to hide the standart « Add to cart » button on a product which can only be choosen as a gift in the « cross-selling » module, it requires to modify the crossseling.tpl file in your theme (or in the module), and to add the following line in the products loop, just before the closing </li> tag :
{hook h="displayProductPriceBlock" product=$orderProduct type='aior_crossseling'}

productscategory.tpl :
With Prestashop 1.6.x, to hide the standart « Add to cart » button on a product which can only be choosen as a gift in the « productscategory » module, it requires to modify the productscategory.tpl file in your theme (or in the module), and to add the following line in the products loop, just before the closing </li> tag :
{hook h="displayProductPriceBlock" product=$categoryProduct type='aior_productscategory'}

5. Upgrade

If a new version is available, you will be advised on the first tab « About / News ».
Before performing an update, you should always back up the old version. Indeed, you could customize the labels of the module, style sheet, mails. So before updating the module, please save the current version on your computer. You must then transfer the new version via FTP to your site, overwriting the old files, and then click on the "Modules" tab in your back-end to execute the update automatically.
Finally you must return your specific modifications in the new files (mail, file language ...).

6. Demonstration

A demonstration site for the module "All-in-one Rewards" is available at:
http://demo.prestaplugins.com

User accounts :
John Doe : john@demo.com / azertyuiop
Jane Doe : jane@demo.com / azertyuiop
Chris MacDonald : chris@demo.com / azertyuiop
Mickael Kael : mickael@demo.com / azertyuiop

Administration : http://demo.prestaplugins.com/admindemo/
Login : demo@demo.com
Pass : demodemo

This demonstration site is reset every 6 hours, so please don't hesitate to do your tests to understand all the options available in the module.

7. Contact

In case of problems or to suggest improvements, please contact Yann Bonnaillie :
